

We are looking for a passionate Generative AI Engineer to design, develop, and deploy AI-powered applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI agents, and modern AI frameworks. The ideal candidate should have hands-on experience in Python, GenAI frameworks, prompt engineering, vector databases, and cloud AI platforms.

Key Responsibilities

Design and build end-to-end Generative AI solutions for enterprise use cases.

Develop RAG-based applications using vector databases and embedding models.

Build AI Agents using frameworks such as LangChain, LangGraph, CrewAI, or similar.
